

What is WebIZ?

Act 432 of 1995 gave the Arkansas Department of Health (ADH) the authority to establish a statewide immunization registry, also called an Immunization Information System (IIS). The current IIS is WebIZ. The data backbone of the ADH Immunization Program, WebIZ meets advanced technology standards for data information systems and has two-way, real-time data exchange designed to meet federal meaningful use requirements. The purpose of WebIZ is to consolidate immunization information among health care professionals, assure adequate immunization levels, and avoid unnecessary immunizations. It also serves as a resource for health care providers and supports public health preparedness activities, including pandemic planning.

*Arkansas state law **REQUIRES** that all immunizations administered to patients 21 years of age and younger must be reported in Arkansas WebIZ.*

Every facility and user (*there are NO shared logins*) must register for the Arkansas WebIZ system. To enroll in Arkansas WebIZ:

1. The Pharmacist In Charge (PIC) or equivalent must fill out the [Pharmacy Site Enrollment Form](#)
2. EACH pharmacist must fill out the [Pharmacist User Enrollment Form](#)
3. Each and every user that will access any part of the WebIZ system will need to fill out the [Pharmacy Technician User Enrollment Form](#)

How is WebIZ a useful tool for pharmacies?

WebIZ improves vaccination rates for patients by providing tools to support the following activities:

- **Timely Immunizations** – WebIZ can remind patients when an ACIP recommended immunization is due or has been missed.
- **Clinical Decision Support** – WebIZ helps providers determine which immunizations are due and helps ensure that patients receive only the immunizations they need.
- **Data Exchange** – WebIZ exchanges immunization information with immunization health care providers. Data exchange between IIS and other information systems helps ensure timely immunizations, consolidation of records, and allows immunization providers to work more efficiently.
- **Quality Improvement**—By documenting all immunization doses in WebIZ, pharmacies can work collaboratively with medical clinics to increase the immunization rates of their patient population and meet their quality metrics.
